

Bug Report: Negative Total Price Accepted

Metadata

(Environment: Production / Sandbox (<https://restful-booker.herokuapp.com>) •
Endpoint: POST /booking •
Severity: Major •
Module: Booking Management / Pricing & Validation •

Description .1

The backend validation logic fails to restrict or validate the totalprice field during booking creation (POST /booking). As a result, the system allows users to submit a negative numerical value for the total price (e.g., -50), treats it as a valid transaction, and successfully stores the record. This is a critical financial/business logic flaw, as a booking price can never be negative

Steps to Reproduce .2

- .Open Postman .1
- .Set the HTTP method to **POST** and the request URL to {{baseURL}}/booking .2
- :Add the following headers .3
 - Content-Type: application/json ○
 - Accept: application/json ○
- Set the request body with a negative value in the totalprice field (see Request section .4 .(below
- .Click **Send** .5

Request Details .3

Method: POST •
URL: <https://restful-booker.herokuapp.com/booking> •
Headers: •
Content-Type: application/json
Accept: application/json

Body (JSON): •
{
 "firstname": "Test",
 "lastname": "NegativePrice",
 "totalprice": -50,

```

    "depositpaid": false,
    "bookingdates": {
      "checkin": "2026-07-01",
      "checkout": "2026-07-05"
    },
    "additionalneeds": "None"
  }
}

```

Response Details .4

(Status Code: 200 OK (Expected a validation error) •

Response Body: •

```

{
  "bookingid": 3413,
  "booking": {
    "firstname": "Test",
    "lastname": "NegativePrice",
    "totalprice": -50,
    "depositpaid": false,
    "bookingdates": {
      "checkin": "2026-07-01",
      "checkout": "2026-07-05"
    },
    "additionalneeds": "None"
  }
}

```

Actual vs Expected Result .5

Actual Result: The server accepted the payload containing a negative price, responded •
 .with **200 OK**, and generated a valid bookingid

Expected Result: The server should reject the request and return a **400 Bad Request** •
 status code with a proper validation error message (e.g., "Total price must be greater than
 .("zero
